Clinical Laboratory Test Update

Kappa:Lambda Free Light Chains

On July 30, 2018 The University of Colorado Hospital will replace the instrument used for measuring Kappa:Lambda Free Light Chains in serum with a new instrument: The Binding Site Optilite.

In anticipation of this change, from May 21 to July 30, testing requests will be completed on both the current instrument as well as on the new instrument. The new instrument's result will be reported as a comment to allow for assessment of any patient specific variation in results from the different instruments.

Concurrent testing will conclude on July 30, at which point the new reference ranges will be included.

Please call Gregory Bocsi, DO at 720-848-7050 if you have any questions or visit our website at <https://www.uchealth.org/professionals/uch-clinical-laboratory/> for additional information.
