## Clinical Laboratory Test Update

### Testosterone by LCMS - Delay in Testing

Effective October 30, 2023, the University of Colorado Hospital Clinical Laboratory had been experiencing periodic delays in testing for Total Testosterone by LCMS due to instrumentation issues.

Samples were sent to our reference lab (ARUP) for testing. The ARUP test, Testosterone Female/Pediatric, was used to achieve the same level of sensitivity as our in-house testing.

No action is needed by ordering locations, the lab is making sure to order the proper send out test that closely matches our patient needs.

Please call Mary Ellen Boyle, 720-848-7067 if you have any questions or visit our test directory at <https://www.testmenu.com/universityhospital> for additional information.
