INTRODUCTION

The following report contains the 2024-2026 Community Health Needs Assessment (CHNA) for UCHealth Highlands Ranch Hospital (HRH). The CHNA was conducted to identify significant community health needs and to help inform the development of an implementation strategy to address the identified needs.

In compliance with federal and state regulations, non-profit hospitals conduct CHNAs once every three years in collaboration with other health care providers, public health departments and community organizations. CHNAs also help guide our investments in community health programs and partnerships that extend UCHealth's not-for-profit mission beyond the walls of our hospitals, improving the lives of those we serve.

Our mission.

We improve lives.

In big ways through learning, healing and discovery.

In small, personal ways through human connection. But in all ways, we improve lives.

Our vision.

From health care to health.

Our values.

Patients first
Integrity
Excellence

UCHealth Highlands Ranch Hospital overview.

HRH is located in Highlands Ranch, Colorado and has served the community since 2019. HRH is a 147-bed acute-care inpatient facility and a Level III trauma center. HRH offers a wide range of clinical services, diagnostic tests, surgeries and treatments. HRH includes a birth center, an intensive care unit and other critical services such as radiology, pharmacy and a lab. HRH's cancer center specializes in treating various types of cancer using proven state-of-the-art technologies, developing new treatments and clinical trials and refining techniques in the ongoing battle with cancer. With specialized focuses on women's care and head and neck cancers, treatments are unique to each individual, ensuring the best possible plan and outcome. HRH is committed to improving the lives of the community's most vulnerable residents and cared for more than 11,000 inpatient admissions and outpatient visits for Medicaid patients during fiscal year 2023.

HRH is part of UCHealth, a Colorado-based health system that offers the most advanced care throughout the Rocky Mountain Region, extending from Colorado to Wyoming and western Nebraska. As Colorado's only integrated community and academic health system, UCHealth is dedicated to improving lives and providing the highest quality medical care with an exceptional patient experience. With more than 200 locations throughout the region, UCHealth pushes the boundaries of medicine, providing advanced treatments and clinical trials to ensure excellent care and outcomes for 2.7 million patients each year. UCHealth is also the largest provider of Medicaid services in Colorado, with more than one million inpatient admissions and outpatient visits for Medicaid patients during fiscal year 2023.

Communities served.

For the purposes of this CHNA, the HRH community is defined as Douglas County. Douglas County represents the geographic area most proximal to the hospital where many HRH patients reside.

Demographic characteristics of the communities served.

Douglas County is part of the Denver-Aurora-Lakewood, Colorado metropolitan statistical area. It is midway between Colorado's two largest cities, Denver and Colorado Springs. Five incorporated municipalities are within Douglas County, including Castle Pines, Castle Rock, Larkspur, Lone Tree and Parker. Each has its own mayor and provides services, many in collaboration with Douglas County.

 UCHealth Highlands Ranch Hospital

Demographic characteristics of the population residing within Douglas County, in comparison with the state overall, are shown in the tables below.

Population:

	Colorado	Douglas County
Population	5,812,069	368,990

Age:

	Colorado	Douglas County
Percentage younger than 18 years of age	21.4%	24.0%
Percentage 65 years of age and older	15.1%	13.2%

Race and ethnicity:

	Colorado	Douglas County
Percentage Non-Hispanic Black	4.1%	1.6%
Percentage American Indian and Alaskan Native	1.7%	0.6%
Percentage Asian	3.6%	5.8%
Percentage Native Hawaiian/Other Pacific Islander	0.2%	0.1%
Percentage Hispanic	22.3%	9.7%
Percentage Non-Hispanic White	67.0%	80.0%
Percentage not proficient in English	3.0%	1.0%
Percentage rural	13.8%	10.3%

Economic stability and poverty:

	Colorado	Douglas County
Median household income	\$82,200	\$129,800
Unemployment rate	5.4%	4.1%
Percentage of adults aged 25-44 with some post-secondary education	73.0%	87.0%
Percentage of people under age 18 living in poverty	12.0%	3.0%
Percentage of children eligible for free or reduced-price school lunch	42.0%	12.0%
Percentage of population who lack adequate access to food	8.0%	6.0%

Preventable hospitalizations:

Hospitalization data for ambulatory care sensitive (ACS) conditions can be used as an indicator of residents' ability to access primary care resources. Hospitalizations for ACS conditions are those that could have been prevented, at least in part, if adequate primary care resources were available and accessible to those patients.

	Colorado	Douglas County
Number of hospital stays for ambulatory care sensitive conditions per 100,000 Medicare enrollees	1,703	1,634

Source for all values above: 2023 County Health Rankings

COMMUNITY HEALTH NEEDS ASSESSMENT

Between November 2023 and April 2024, HRH conducted the CHNA which provided an opportunity for the hospitals to engage public health experts, medical providers and community stakeholders in a formal process to ensure that community benefit programs and resources are focused on significant health needs identified within the community it serves.

Methods used to conduct the Community Health Needs Assessment.

A multi-phased approach was used to identify the top health priorities for future impact. The process included:

- A comprehensive analysis of local population health indicators.
- Solicitation of community input on local health issues through:
 - Distribution of a web-based survey to local community-serving organizations, school districts and government agencies.
 - A web-based survey distributed to health care providers at HRH to gather input on community health needs.
- Engagement with the Douglas County Public Health department and review of their Community Health Assessment (CHA).

After collecting data and soliciting input from the community and health care providers, the Internal Advisory Group (IAG) for HRH, a subset of the hospital's leadership team, reviewed all information obtained from the activities described above and identified recommended health needs areas of focus for the 2024-2026 CHNA. As described later in this report, recommendations for priority areas of focus were presented to the HRH Board of Directors for review and approval.

The following illustrates the CHNA process components and participants.

Identify community health needs.

Secondary data analysis:

- Population characteristics.
- Social and economic factors.
- Health data.

Community and health care provider input:

- Brainstorming of community health issues.
- Ranking of the community's most significant issues.

Prioritize significant community health needs.

Consolidation and synthesis of information:

- In-depth secondary data analysis.
- Community and provider input.
- IAG recommendations.

Prioritization of issues:

- Scope and severity.
- Hospital's ability to impact the issue.
- Availability of evidence-based strategies to address the need.
- Alignment with goals of UCHealth, local community and Colorado overall.

Written comments on previously conducted Community Health Needs Assessment.

The 2021-2023 HRH CHNA and corresponding implementation strategy report have been available to the public on the UCHealth public website since 2021. In 2022 and 2023, HRH conducted community benefit public meetings to solicit input from local public health and community organizations, other health care providers and the public. No comments requiring a response were received specific to the CHNA, CHNA process or implementation strategy.

FINDINGS

Secondary data review and analysis.

The initial step of the secondary data review included an assessment of local population health indicators obtained through the County Health Rankings (2023 report year), the Colorado Health Indicators database (2020–2022) and the 2021 Healthy Kids Colorado Survey. Indicator values were assessed at the county and state levels.

Summary tables of the key health indicators in the HRH community were developed to illustrate the overall health of the community (see Appendix 1 for the data tables and related sources).

Key health needs were determined based on the indicator values and trends, current priorities of the local county health department, the potential to impact the issues using evidence-based practices and alignment with the priorities of HRH.

Categories evaluated include:

- Demographics, education and socioeconomic status.
- Health care access and services.
- Health behaviors (including unintentional injury).
- Maternal and child health.
- Mental health (including attempted-suicide hospitalizations and mortality).
- Nutrition, physical activity, and body-mass index.
- Substance use disorders.
- Specific health conditions (including hospitalization, morbidity, and mortality rates).

From this review, the most significant issues identified were:

- Access to care.
- Behavioral health.
- Prevention and screening of cancer.
- Chronic disease.
- Injury.
- Maternal health.

Information gaps impacting ability to assess needs.

Within the review of the secondary data, gaps were identified related to the health status of minority populations as well as individuals who are medically underserved due to lack of adequate insurance or who encounter barriers to receiving timely and comprehensive health care services.

To gather additional insights, HRH regularly participates in meetings facilitated by the county public health departments and other partner agencies that focus on identifying and implementing best practices for reducing these barriers.

Community engagement synopsis.

To gather input on the most significant health issues, HRH provided a web-based survey to health care providers and key community stakeholders in Douglas County. Agencies serving members of medically underserved, low-income and minority populations were included in the survey distribution. Respondents were asked to rank each of the significant issues identified above, as well as describe other health issues for consideration. Results from these surveys are shown below.

Additionally, findings were reviewed from the Douglas County 2021-2026 Community Health Assessment (CHA). The Douglas County process relied on multiple data sources including primary data collected through surveys, focus groups, and interviews and secondary data sources (data collected by another entity or for another purpose such as Colorado Department of Health, US Census Bureau, and Colorado Health Access Survey). The priority health areas identified for Douglas County through its CHA process are disease management and prevention, behavioral health and injury prevention.

Provider and community survey results.

The survey asked respondents to rank a set of community health needs in order of importance to the community. Results are provided in the table below. The score represents the aggregate points for each health need based on the ranking and prioritization from the respondents.

Health need	Community Survey		Provider survey	
	Score	Rank	Score	Rank
Behavioral health	96	1	15	T-2
Access to health care	94	2	20	1
Maternal health	60	3	7	6
Chronic disease	56	4	15	T-2
Cancer	50	5	14	4
Injury	43	6	13	5

Survey respondents also identified community agencies addressing these issues and with whom HRH could potentially partner or help support. This input will be used during the development of the CHNA implementation strategy later this year.

Community-wide health care resources available to address needs.

Recognizing the current scope of services available to meet the health care needs of community members is a vital component of a CHNA. The HRH community is served by several acute-care hospitals, community-based health centers and a network of medical and mental health providers. In addition, HRH offers a wide array of virtual health options. Though services may be available, the CHNA findings reveal that the ability to receive care in a timely and coordinated manner remains a challenge for many vulnerable residents.

Proven strategies available to impact health issues.

A crucial factor for consideration during the health issue prioritization process was recognizing the availability of proven strategies or evidence-based interventions that, if implemented, could make an impact on the significant health issues identified.

Resources reviewed included:

- [Community Preventive Services Task Force Findings](#)
- [County Health Rankings Guide—What Works for Health](#)
- [Healthy People 2030 Evidence-Based Resources](#)

Summary of actions taken by hospital since the last Community Health Needs Assessment.

To understand the effectiveness and scope of actions taken by HRH since completion of its most recent CHNA, a review of community benefit activities was completed. The 2021-2023 CHNA identified access to primary care, behavioral health and early detection and prevention of cancer. A few examples of programs and initiatives currently in process to address the prior findings are listed below.

Access to care:

- Virtual primary care appointments
- Aurora Health Alliance collaboration
- Forensic nurse exam services
- Recruitment of new physicians into CU School of Medicine and UCHHealth Medical Group
- Stop the Bleed program

Behavioral health:

- Integrated primary care and behavioral health
- Virtual behavioral health consults
- Metro Denver Partnership for Health participation
- Alternatives to opioids program

Cancer:

- Community-based screenings for early detection of cancer
- Cancer prevention education series for adults aged 50+
- Nicotine cessation program

PRIORITIZATION AND BOARD OF DIRECTORS APPROVAL

Internal Advisory Group recommendations.

The HRH Internal Advisory Group (IAG) reviewed all findings obtained from the activities described previously. The HRH IAG conducted a meeting specifically to identify health needs priorities for the CHNA and considered the following criteria during the decision-making process:

- Scope and severity of the health need.
- Potential for HRH to impact the health need.
- Alignment with UCHealth, local, state, and national objectives.
- Economic feasibility to address the health need.

The HRH IAG identified the following health needs as priorities for the 2024–2026 CHNA:

- Access to care.
- Behavioral health.
- Early detection and prevention of cancer.

A synopsis of key CHNA findings specific to these issues is provided in the following sections of this report.

Access to care.

With the advent of the Affordable Care Act, there has been a sharp decline in the proportion of residents without any health insurance in Douglas County; however, there are still many barriers to accessing services through both Medicaid and other payer sources.

Research shows that access to primary care is associated with positive health outcomes. Individuals with an established primary care physician are more likely to receive recommended preventive services such as flu shots, blood pressure screenings and cancer screenings. Disparities in access to primary health care include language-related barriers, physical disabilities, inability to take time off work to attend appointments and transportation-related barriers.

In Douglas County, the ratio of primary care providers to the population is unfavorable compared to the state average, as there is one provider for every 1,440 residents in Douglas County versus one provider for every 1,200 people across Colorado.

Behavioral health.

According to the U.S. Department of Health and Human Services, mental health disorders are among the most common causes of disability in the U.S. The resulting disease burden of mental illness is among the highest of all diseases.

Similar to primary care, the ratio of mental health providers to the population is unfavorable relative to the state average (one provider for every 620 residents in Douglas County compared to one provider for every 230 people across Colorado). Also, while slightly more favorable than the state overall, 12.0% of adults in Douglas County reported their mental health was poor for 14 or more days within the past 30 days.

Additionally, the effects of substance-use disorders are cumulative, significantly contributing to costly social, physical, mental and public health problems. The Centers for Disease Control and Prevention reports that binge drinking is the most common, costly and deadly pattern of excessive alcohol use in the U.S. Binge drinking is defined as a pattern of drinking that brings a person's blood alcohol concentration to 0.08 g/dl or above. This typically happens when men consume five or more drinks or women consume four or more drinks in about two hours. In Douglas County, 22.0% of adults report binge drinking, higher than the state average of 20.0%.

Behavioral health	Colorado	Douglas County
Ratio of population to mental health providers	230:1	620:1
% of adults reporting that their mental health was not good for 14+ days during the past 30 days	13.0%	12.0%
Mental Health diagnosed hospitalizations	2,854.1	2,432.7
% of adults who report binge drinking (5+ drinks on one occasion in past month)	20.0%	22.0%
% of adults who are current smokers	13.0%	9.0%

See the Appendix for additional supporting information and relevant data sources. Values highlighted in red indicate measures that are less favorable when compared to the state values.

Cancer.

Cancer is one of the leading causes of death in the U.S. as well as in Douglas County. The likelihood that an individual will develop cancer is affected by lifestyle choices. Avoiding tobacco, eating a healthy diet, maintaining a healthy weight, being physically active and avoiding sun exposure are all choices that can help prevent cancer. Adhering to recommended screening guidelines is also effective at early detection of many types of cancers.

Douglas County reported incidences of cancer that are unfavorable compared to state averages, both in aggregate and for many specific types of cancer. These are illustrated in the table below.

Age-adjusted Incidence Rates of Cancer Per 100,000 Population	Colorado	Douglas County
All cancer sites combined	369.2	413.6
Lung and bronchus	35.9	36.4
Breast cancer (females)	63.2	78.7
Prostate cancer (males)	47.3	56.5
Colorectal cancer	28.1	30.1
Invasive cervical cancer (females)	2.7	2.6
Melanoma of skin	18.0	25.7

See the Appendix for additional supporting information and relevant data sources. Values highlighted in red indicate measures that are less favorable when compared to the state values.

Board of Directors review and approval.

During the May 2024 meeting, the HRH Board of Directors, which includes representatives from the surrounding communities, reviewed, discussed and approved the information contained within this report.

Acknowledgments, recommendations and next steps.

We thank our partnering agencies, medical providers and community members who provided insight and expertise that helped complete this report.

In the following months, implementation strategies designed to address the identified health needs within Douglas County will be prepared and presented to the HRH Boards of Directors for approval.

The HRH CHNA report will be made available to the public for viewing or download on the [UCHealth website](#), as well as in hard copy located in the HRH administrative offices.

APPENDICES

Appendix 1 – Data tables and sources

FY 2024-2026 Community Health Needs Assessment indicator values

Demographics	Year/Source	Colorado	Douglas County
Population	2023 CHR	5,812,069	368,990
% below 18 years of age	2023 CHR	21.4%	24.0%
% 65 and older	2023 CHR	15.1%	13.2%
% Non-Hispanic Black	2023 CHR	4.1%	1.6%
% American Indian and Alaskan Native	2023 CHR	1.7%	0.6%
% Asian	2023 CHR	3.6%	5.8%
% Native Hawaiian/Other Pacific Islander	2023 CHR	0.2%	0.1%
% Hispanic	2023 CHR	22.3%	9.7%
% Non-Hispanic White	2023 CHR	67.0%	80.0%
% not proficient in English	2023 CHR	3.0%	1.0%
% female	2023 CHR	49.3%	49.6%
% rural	2023 CHR	13.8%	10.3%

Health Outcomes	Year/Source	Colorado	Douglas County
Quality of Life			
% of adults reporting poor or fair health (age-adjusted)	2023 CHR	10.0%	7.0%
Maternal and Child Health			
% of live births with low birth weight (LBW) (<2500 grams)	2023 CHR	9.0%	9.0%
Number of all infant deaths (within 1 year) per 1,000 live births	2023 CHR	5	3
Mental Health			
% of adults reporting that their mental health was not good for 14+ days during the past 30 days	2023 CHR	13.0%	12.0%
% of high school students who felt sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months	2021 HKCS	39.6%	36.3%
% of high school students who seriously considered attempting suicide during the past 12 months	2021 HKCS	17.1%	15.1%

Health Factors	Year/Source	Colorado	Douglas County
Tobacco Use			
% of adults who are current smokers	2023 CHR	13.0%	9.0%
% of high school students who have ever used an electronic vapor product	2021 HKCS	30.4%	23.9%
% of high school students who smoked cigarettes on one or more of the past 30 days	2021 HKCS	3.3%	2.8%
Weight Status and Physical Activity			
% of adults (18+) who were obese (Body Mass Index > = 30)	2023 CHR	24.0%	20.0%
% of high school students physically active for a total of at least 60 minutes per day on five or more of the past 7 days	2021 HKCS	49.0%	53.3%
% of adults age 20 and over reporting no leisure-time physical activity	2023 CHR	17.0%	12.0%
Alcohol and Drug Use			
% of high school students who binge drank (4+ drinks for females, 5+ drinks for males, within a couple of hours) on one or more of the past 30 days	2021 HKCS	12.5%	14.7%
% of adults who report binge drinking (5+ drinks on one occasion in the past month)	2023 CHR	20.0%	22.0%
% of driving deaths with alcohol involvement	2023 CHR	34.0%	34.0%
Number of drug poisoning deaths per 100,000 population	2023 CHR	21	10
Sexual Activity			
Number of newly diagnosed chlamydia cases per 100,000 population	2023 CHR	453.9	215.0
Number of births per 1,000 female population ages 15-19	2023 CHR	16	4
Clinical Care - Access to Care			
% of population under age 65 without health insurance	2020 CEN	9.3%	4.8%
Ratio of population to primary care physicians	2023 CHR	1,200:1	1,440:1
Ratio of population to dentists	2023 CHR	1,180:1	1,410:1
Ratio of population to mental health providers	2023 CHR	230:1	620:1
Clinical Care - Quality of Care			
Number of hospital stays for ambulatory care sensitive conditions per 100,000 Medicare enrollees	2023 CHR	1,703	1,634

Specific Health Conditions - Self-Reported	Year/Source	Colorado	Douglas County
% of high school students who had ever been told by a doctor or nurse that they had asthma	2021 HKCS	18.1%	17.8%
% of adults who currently had asthma	2018-2020 COHI	9.5%	7.6%
% of adults aged 20 and older with diagnosed diabetes	2023 CHR	7.0%	6.0%
Number of persons living with a diagnosis of HIV infection	2023 CHR	269	92

Footnotes and sources:
