

CARE Innovation Center

The CARE Innovation Center is the UHealth clinical-validation sandbox that helps company partners test, pilot, optimize and commercialize the most innovative new technologies in health care. CARE Innovation specializes in fundamentally changing the way health care is delivered to patients and seeks partnerships with digital health companies that challenge the status quo. CARE Innovation seeks partners from seed-stage startup companies to multinational organizations for co-development. Venture capital investment opportunities are also available for highly qualified partners. UHealth offers co-development partners access to clinical subject-matter expertise and know-how for companies to build new modules or enter new verticals, all while improving their technology's integration within the clinical workflow. Co-development partners will have the opportunity to implement their technology at the point of care, receiving valuable feedback from clinicians, patients and hospital executives regarding how to maximize impact.

Partnerships.

PARTNER

Providing clinical validation through co-development partnerships. Access to clinical infrastructure and subject-matter expertise to drive rapid adoption and scaling of new digital health innovations.

CLIENT

Implementation of your solutions within the hospital environment, scaled through all 12 UHealth hospitals. Working through partnership to build something we are eager to buy.

INVESTOR

UHealth can make a strategic equity investment a company. This investment could put both UHealth and the University of Colorado on your cap table to help you leverage future partners, clients and investments.

UHealth is one of the largest health care providers and the only academic medical center in the Rocky Mountain region.

CARE Innovation Center

Dedicated clinical expertise.

CARE Innovation has access to more than 5,000 providers across Colorado, including more than 3,000 University of Colorado School of Medicine (CU) faculty, many of whom are nationally renowned experts in their fields and on the front lines of delivering clinical care. These professionals can skillfully advise on product design, study protocols, workflow integrations and product scaling.

Enterprise EHR and cloud-based warehouse.

This is a unique enterprise data warehouse to support the innovation initiative and containing nearly a decade of comprehensive patient data built on the Google Cloud Platform with the appropriate secure and virtualized data access. This infrastructure enables seamless closed-loop capabilities between the enterprise, single instance, Electronic Health Record (EHR) and enterprise data warehouse with informatics capability to pilot and scale.

Access to a large, diverse patient population.

More than 1.6 million patients are served annually across the UCHealth system; that includes all care settings, including a large academic medical center, numerous ambulatory-care and virtual-care centers as well as community-based hospitals.¹ The combined resource of diverse providers, academic and community, practicing in diverse environments allows for real-world testing in all care environments at the point of care. Our rapid IRB review process is one of the most efficient in the nation.

Speed and operational efficiency.

All innovation operational processes and care teams are uniquely designed to enable rapid product development and testing in the clinical environment.

PARTNER WITH US

INTAKE

Submit an initial intake form to CU Innovations at uchealth.org/innovation. CU Innovations will conduct initial diligence and reach out with further questions.

PITCH

Top technologies will pitch to UCHealth leadership to ensure the potential partnership aligns with hospital-innovation priorities.

COLLABORATE

Company will be paired with subject-matter experts to create an action plan for co-development projects.

STEER

Final collaboration proposal will be approved by the innovation steering committee.

IMPLEMENT

Co-development will begin.
