

COVID-19 Convalescent Plasma Process

Thank you so much for your interest in donating what is known as COVID-19 Convalescent Plasma or “CCP”

* You must have a positive PCR nasal swab or antibody test for COVID-19 within the past three months and be symptom free for at least 14 days in order to be considered as a potential donor. We will need a copy of these test results in order to move forward with the process listed below.

Contact information

At this time, our Donor Recruiter, Kaitlin Zobel, is our contact for donors. Please [fill out this form](#) or call 970.495.8987 **and leave a detailed message.**

Our process for evaluating potential donors

The Donor Recruiter will contact you to schedule a pre-screening appointment to make sure that you are eligible to be a CCP blood donor – all CCP donors must meet the established donor requirements. This initial screening appointment will be via phone. During this appointment, we will:

- Review the blood donor requirements.
- Ensure we have a copy of your test results if the testing was not performed at a UHealth facility and make sure that it has been at least 14 days since your last symptoms or 14 days from your positive test if you had no symptoms of COVID-19.

If you are a female donor and have had at least one pregnancy, we will schedule an appointment to take a tube of blood to do an HLA test – plasma from females who have been pregnant may present a risk to certain patients.

Once you have successfully completed the pre-screening, one of our UHealth Garth Englund Blood Center staff members will reach out to schedule you at our Fort Collins location (address located below).

Thank you for your interest and consideration in donating to your community members in need!
