### COVID-19 Therapies

**Does the patient need treatment or prophylaxis for COVID-19?**
- Clinicians can order anti-COVID-19 antiviral therapies within EPIC
- Please review the [therapeutics guide](#) before prescribing

---

### Covid 19 Therapy Criteria

**Consider the following criteria when ordering COVID-19 therapy treatment.**
- EUA Criteria include:
  - Age ≥65
  - BMI ≥26
  - Pregnant
  - Weakened immune system (Hemoglobin A1C ≤6%)
- Certain conditions

**Note:** Primary care facilities for COVID-19 prophylaxis

---

### Is the patient immunocompromised?

**Yes**
- Link to [Tri-County PAXLOVID Patient Eligibility Screening](#)

**No**
- [EUA Criteria include](#)

---

### Is patient COVID-19 positive?

**Yes**
- [Remdesivir](#) 200 mg IV x 1 dose
- [Evusheld](#) 600 mg IM (two 300 mg injections) in 6-month increments as prophylactic for extremely immunocompromised patients

**No**
- [Paxlovid](#): nirmatreliver 300 mg PO (two 150 mg tablets) with ritonavir 100 mg (one 100 mg tablet) taken together twice daily for 5 days
- [Bebtelovimab (EUA)](#) 175 mg / 2 mL IV push over at least 30 seconds

---

### Is symptom onset ≤ 5 days?

**Yes**
- Link to [Tri-County PAXLOVID Patient Eligibility Screening](#)
- [Remdesivir](#) 200 mg IV x 1 dose
- [Evusheld](#) 600 mg IM (two 300 mg injections) in 6-month increments as prophylactic for extremely immunocompromised patients

**No**
- [Remdesivir](#) 200 mg IV x 1 dose
- [Evusheld](#) 600 mg IM (two 300 mg injections) in 6-month increments as prophylactic for extremely immunocompromised patients

---

### Is symptom onset ≤ 7 days?

**Yes**
- [Remdesivir](#) 200 mg IV x 1 dose
- [Evusheld](#) 600 mg IM (two 300 mg injections) in 6-month increments as prophylactic for extremely immunocompromised patients

**No**
- [Remdesivir](#) 200 mg IV x 1 dose
- [Evusheld](#) 600 mg IM (two 300 mg injections) in 6-month increments as prophylactic for extremely immunocompromised patients

---

### Evusheld Criteria

- [EUA Criteria include](#)
- [Remdesivir](#) 200 mg IV x 1 dose
- [Evusheld](#) 600 mg IM (two 300 mg injections) in 6-month increments as prophylactic for extremely immunocompromised patients
- [Evusheld](#) is available for administration with a provider order in the COVID-19 vaccine clinics
- [Self-scheduling for Evusheld through My Health Connection (MHC)](#) typically, 48 hours after the order is placed
- IF unable to use MHC: Instruct patient to call HealthLink (720) 462-2255 at least 24 hours after order placement
- Patients who have recently been vaccinated or received a COVID-19 booster should wait at least 14 days before receiving Evusheld
